Applied Predictive Modeling

Max Kuhn, Kjell Johnson

Applied Predictive Modeling Max Kuhn, Kjell Johnson
Winner of the 2014 *Technometrics* Ziegel Prize for Outstanding Book

Applied Predictive Modeling covers the overall predictive modeling process, beginning with the crucial steps of data preprocessing, data splitting and foundations of model tuning. The text then provides intuitive explanations of numerous common and modern regression and classification techniques, always with an emphasis on illustrating and solving real data problems. Addressing practical concerns extends beyond model fitting to topics such as handling class imbalance, selecting predictors, and pinpointing causes of poor model performance—all of which are problems that occur frequently in practice.

The text illustrates all parts of the modeling process through many hands-on, real-life examples. And every chapter contains extensive R code for each step of the process. The data sets and corresponding code are available in the book's companion AppliedPredictiveModeling R package, which is freely available on the CRAN archive.

This multi-purpose text can be used as an introduction to predictive models and the overall modeling process, a practitioner's reference handbook, or as a text for advanced undergraduate or graduate level predictive modeling courses. To that end, each chapter contains problem sets to help solidify the covered concepts and uses data available in the book's R package.

Readers and students interested in implementing the methods should have some basic knowledge of R. And a handful of the more advanced topics require some mathematical knowledge.

From reader reviews:

Jean McFerren:

The book Applied Predictive Modeling can give more knowledge and information about everything you want. Why must we leave the best thing like a book Applied Predictive Modeling? A few of you have a different opinion about e-book. But one aim that book can give many information for us. It is absolutely right. Right now, try to closer together with your book. Knowledge or details that you take for that, you are able to give for each other; you may share all of these. Book Applied Predictive Modeling has simple shape however, you know: it has great and large function for you. You can look the enormous world by open and read a publication. So it is very wonderful.

Conrad Degregorio:

Nowadays reading books be a little more than want or need but also be a life style. This reading behavior give you lot of advantages. The advantages you got of course the knowledge the actual information inside the book which improve your knowledge and information. The details you get based on what kind of guide you read, if you want send more knowledge just go with education books but if you want experience happy read one along with theme for entertaining like comic or novel. The actual Applied Predictive Modeling is kind of guide which is giving the reader erratic experience.

Jolene Rivera:

As we know that book is essential thing to add our knowledge for everything. By a book we can know everything we want. A book is a range of written, printed, illustrated or perhaps blank sheet. Every year had been exactly added. This guide Applied Predictive Modeling was filled in relation to science. Spend your time to add your knowledge about your research competence. Some people has diverse feel when they reading a book. If you know how big benefit of a book, you can experience enjoy to read a publication. In the modern era like at this point, many ways to get book you wanted.

Syble Mills:

That book can make you to feel relax. This particular book Applied Predictive Modeling was colorful and of course has pictures on the website. As we know that book Applied Predictive Modeling has many kinds or style. Start from kids until teens. For example Naruto or Investigator Conan you can read and think you are the character on there. Therefore not at all of book are usually make you bored, any it offers you feel happy, fun and relax. Try to choose the best book for you personally and try to like reading this.
